**24 hours.**

**That's all it takes.**

**A new kind of war has begun.**

Pak Han-Yong's day is here. An elite hacker with Unit 101 of the North Korean military, he's labored for years to launch *Project Sonnimne*: a series of deadly viruses set to cripple Imperialist infrastructure.

**And with one tap of his keyboard, the rewards are immediate.**

Brendan Chogan isn't a hero. He's an out-of-work parking enforcement officer and one-time collegiate boxer trying to support his wife and children. But now there's a foreign enemy on the shore, a blackout that extends across America, and an unseen menace targeting him.

**Brendan will do whatever it takes to keep his family safe.**

In the wake of the cyber attacks, electrical grids fail, satellites crash to earth, and the destinies of nine strangers collide.

**Strangers whose survival depends upon each other's skills and courage.**

**For fans of Tom Clancy, ALL SYSTEMS DOWN is a riveting cyber war thriller which presents a threat so credible you'll be questioning reality.**

## From Reader Review All Systems Down for online ebook

### Arpine says

*All Systems Down* draws you in from the first pages – once I started reading, it was hard to put down (no pun intended). It's sci-fi, yes, but taking place in a world that we live in today. The reality described on the book's pages is scary on a few dimensions – one, it highlights the vulnerabilities of the modern world and shows how much we have come to rely on technology; and two, it depicts what can happen with the society should it collapse.

Watching multiple storylines unfold separately, waiting for them to intertwine, was intriguing. While the essence of the ending seemed a bit predictable, how the characters would get there, and some of the specific details were refreshing. It was great to see the potential for the continued storyline, and a few open endings, and I'm excited to see more from Sam Boush in the future!

Note: I was provided an ARC by the publisher for a non-biased review.

Yes, I'll admit I'm a fan of the book "One Second After" by William Forstchen, where the reader follows one family, and the town they live in, through the ordeal of what life would be like after an EMP event. But "All Systems Down" is a different read. It's a cyber tech thriller that introduces you to a cast of characters attempting to navigate through the first chaotic days after our country is brought to its knees by a coordinated attack on our power grid and technology. It then sets the stage for a future series of stories featuring this unlikely group as they band together to survive. This was a quick read for me. The author kept me turning the pages. Honestly, I would've enjoyed it more if the novel was a bit longer. It felt a little rushed at the end. But I'm definitely interested in reading the next book when it arrives.

I read a good number of books, 1-2 per week. This is one of the best I've read this year. It's a page turner that starts out with a very military feel, but quickly moves into the experience of (mostly) ordinary people across the country as they deal with the collapse of infrastructure.

Highly recommended!

Looking forward to this being a movie. Or maybe with more books in the series, a TV show. Great read!

Full disclosure; I was provided an advance copy. Thanks to Sam Boush and Lakewater Press. This is an unbiased review.

The book doesn't have a slow or boring moment in it. From the beginning, you're drawn into a world that's identical to our own. No near future. It's just now. And you get the feeling that what's happening in the book is not just plausible but maybe even imminent.

The cast of characters is so well done. I feel like I know them personally. The protagonist, Brendan, is likeable but imperfect. The good guys, the bad guys... they're fully realized.

I loved this book. If there's a sequel, I want to read it.

## **Scranton says**

This is my kinda book. I only wish Tom Clancy were alive to read it.

## **Kline DuPont says**

I'm not sure the science fiction in here is very apparent. Definitely some. But it's mostly just a wonderful thriller. Dark, but not too dark. Some military, but not too much. An all-around splendid read!

All Systems Down was an enthralling read. Sci-fi and thrillers are not usually my genre of choice - but I was hooked after the first few pages! Being a Portland native, I especially loved the detailed and accurate depiction of my city - but it also made it incredibly terrifying because of the plausibility of the rapid devolution of the city and society in the wake of a massive cyber attack. Boush is a gifted writer - and I look forward to reading his next book! Also, thanks to All Systems Down, I'm working on my cyber war emergency prep kit!

If I'm being honest, rarely are my "go-to" reads shelved as "techno-thriller" or "post-apocalyptic" . . . I'm more an Edgar Sawtelle type of girl. But, at the end of the day, what I like and want is a well-crafted, thoughtful story. Lucky for me, that's exactly what I got with this book. All System's Down weaves a great story—one that hooks you from the start with great plot suspense, as well as deep empathy for each of the characters. I highly recommend this book and can't wait for Mr. Boush's next novel.

I read this book in 2 days. I have 3 young kids and a job. I rarely am able to read a book in 2 days, but this book was that good. I couldn't put it down. And if I did put it down (again, 3 kids) then it obsessed over it. Even after I was done reading it, I obsessed over it. I really hope it isn't the last book by Mr. Boush, but since it says #1, I am hopeful.

Set in Portland, Oregon, many local landmarks came up which really brought the book alive! Just be ready to start prepping for the apocalypse.

I had seen All Systems Down on Goodreads and thought it sounded like an interesting read, and I wasn't disappointed!

Centering around a blackout across America, the reader meets the main characters just as all of the systems fail due to a virus that has bee put in there by a master hacker as part of Project Sonnimne.

All Systems Down asks the question what would you do if everything around you changed for the worst essentially. Could you survive? How would you survive if everything went dark?

All Systems Down was definitely an intriguing read. We got glimpses from those who created the virus,

along with following the characters that were impacted at the time of the event.

Something about this book says post-apocalyptic fiction, because survival becomes the key, but there is also a lot more in play here. The author has created an engaging plot, and I found myself rooting for certain characters, while wishing bad things on others. You'll have to read it for yourself to see why though.

All Systems Down is a techno thriller, with a dystopian feel to it once the blackout hits, Easy to follow with some divisive characters, it is great escapism.

Recommended for sure!

### **Jessica Rachow says**

All Systems Down drew me in from the beginning. It takes place now, in a world identical to our own, which makes it that much more thrilling. This book feels real, like this is plausible, and possibly imminent.

Each character felt like a real person. The dialogue really shined, and the personalities and reasons for being included in the story were fantastic.

This is Sam Bousch's debut novel, which blows me away. He has really honed his writing craft, to create a realistic, well researched world with believable characters and heart pounding suspense.

With themes of (terrifyingly realistic) reliance on technology, and what could happen when society collapses, All Systems Down was a book that hooked me from the start and had me until the last page. I highly recommend this one!

\*I received this book as part of a blog tour. All opinions are my own.\*

Some books stay with you long after you've read them. This is one such masterpiece. The cyber war seems all to plausible. The characters are fantastic, relatable, unique.
