Lizzie says

A novella in the Pern saga. It has been several turns since Sean presented to Admiral Benden the Dragonriders of Pern (set about halfway through the 50-year threadfall). The dragons have prospered and to be a dragonrider is desireable. Sean and Sorka, along with their dragons and the other queens and bronze riders have filled every corner of the weyr. It is time to expand, before the holders take the best cave systems. Torene has her heart set on one in particular. This short book is really Torene's story and the establishment of Benden Weyr. It is also the story of the logistics of a new version of the species successfully expanding the defense of Pern and the colonists and how to set up a new weyr - from heating to water supplies to the use of the some of the last working equipment from a technology that is worn out and no longer replaceable.
