Virgil Fuqua says

I'm having trouble with books on listing. Take for instance this book, why are they not showing the cover? This book is in about its 15th printing.

On Basilisk Station is the first book by David Weber introducing us to Honor Harrington. First the setting of the story. A small star Kingdom consisting of three planets and a separate star system that he hold as a protectorate. This separate system is called by their navy Basilisk Station. The story is approximately 2,000 years in the future. The human race has settled an area within a 5,000 light year diamenter sphere with earth about the center.

Manticore the star kingdom is considered to be a fringe government on the edge of settled space. To the Kingdom which has existed for almost 600 years they are the shining light of civilization Honor Harrington is starship captain, with a treecat bond from Sphinx. Through a convoluction of event in the story she ends up in command of Basilish Station.

There she becomes the first Comander to take her position seriously and does the job that is call on to be done. She basically catches every body doing business as ususl with the fingers in the cookie jar.

Complaints pour into the naval headquarters from merchants and dipolmats.

Naval headquarts? Well the rub their hands and grin. They plotted and twerks the rules to ensure that she stays in command. This is the beginning of her rise not only in her naval position but in her "social" position. Now here I have a problem discussing. What do you call it when a person goes for a commonner to a memberof noblitiy and then continues to increase her position.

Let me say, this story is very good. The series which at this time consiste of 14 books is really good. So good in fact and so realistic that David Weber has let Erid Flint begin to write a split of of the story.

And why don't they have a cover to this? Amazon does!

Melissa says

A favorite read! Great intro to the Honorverse!

One of the best "strong" female lead characters ever. Honor is both smart and vulnerable. She's someone you can admire and empathize with.

Great universe and excellent depth of technology.

Next book is even better!
